*Family
is not just an
important thing
....
It's everything*

CONGRATULATIONS!

You are on the first step towards owning an Elite Greenhouse. Selecting a greenhouse can be a complicated and confusing process with so many models, manufacturers and variants to choose from. We, as the manufacturer, are here every step of the way to help you, make you feel at ease, and highlight what you can expect to receive for your money.

WHO?

We are Elite Greenhouses Limited and are proud to say we are a privately owned, third generation UK family business, celebrating its Diamond Jubilee year in 2013. In such an ever changing "throw away" culture, we continue to manufacture, right here in the UK, the widest range and one of the strongest aluminium greenhouses money can buy.

WHAT?

Despite having thousands of happy customers over the last 60 years, we have never lost sight of our founders' vision to demand excellence and complete satisfaction. We are passionate and enthusiastic about greenhouses and continue to produce a life long product, backed by a 10 year guarantee, made right here in the UK and delivered by our own fleet of vehicles to your home.

We guarantee that no aluminium part will rust, warp or be of unmerchantable quality. Excludes glazing or weather damage.

WHERE?

At Elite Greenhouses we only manufacture our products from our plant in Bolton, Lancashire and do not sell direct. We have hundreds of loyal, hard-working and well established authorised dealers displaying our products the length and breadth of the UK, so you are sure to be near to a site where one of our helpful and friendly agents can assist you with any enquiry. To find where your nearest agent is or for any further information please feel free to contact us on 01204 791488 or via email at enquiries@elite-greenhouses.co.uk.

HOW?

To become part of the Elite Greenhouse family and begin to enjoy the pleasures and benefits which our products offer, for many years to come, simply choose the model of your choice from our brochure, place an order with one of our agents, sit back and relax whilst we put the hard work into making it for you.

Every greenhouse which leaves our door is made with care, pride and attention to detail by our family so that it can be enjoyed by your family for generations to come.

60 YEAR ANNIVERSARY

WHY?

When it comes to choosing a greenhouse there is a lot of choice in today's market. Before you decide where to spend your money, we suggest you do your homework, have a good look around at everything on offer and compare the features and qualities of each manufacturer. A greenhouse should be a long lasting and enjoyable investment and you will obviously want a manufacturer who can offer the size and height you require, however, there are other factors which we feel you should consider which we know Elite can offer:

- 60 continuous years of successful British manufacturing, like our greenhouses we have stood the test of time.
- 10 Year Frame Guarantee as standard with every greenhouse we make.
- 9 Superb Colour Options to suit your garden environment. All aluminium accessories can also be powder coated.
- British Design and Manufacture with all components conforming to British Standards.
- No Automated Service – call us and speak to a real person who is happy to help.
- High Tensile Bolts – Elite's bolts have been scientifically tested to be 2 ½ times stronger than standard aluminium bolts, therefore, will not shear and continue to maintain the strength of your greenhouse throughout its lifetime.
- Bar Thickness – all Elite glazing bars will support a fixed shelf and staging, such as the diamond range - not all manufacturers can offer this.
- Stainless Steel Clips throughout which eradicates the fear of rust, warp and rot.
- Neoprene Beading – a cushion beading which has greater resistance to wind.
- Ensure there are no large gaps at the eaves section which would allow a significant ingress of water into the greenhouse.
- Glazing Options to suit budget and needs.
- Packages available on most greenhouses for even better value.
- Fantastic range of accessories available.
- Longer lengths – we can make your greenhouse to any length you require.

64

4'3" WIDE COMPACT

Unlimited Lengths from 4'5"

For such a small building the Compact is packed with many features found on larger models, such as Double Doors and Elite's low threshold for easier access making this such a popular choice. If your growing space is limited, then the Compact offers a surprisingly spacious environment with an eaves height of 5' 1 1/2", and is an ideal building for the beginner.

All of our accessories are compatible with this model and package deals are available helping you increase the growing potential without breaking your budget.

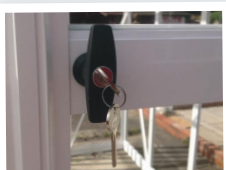

Compact 4'x4' (Nominal), Integral Base, Alloy, Full Sheet Toughened Glass

THE COMPACT'S FRAME ACCOMMODATES SUPER STRENGTH DIAMOND INTEGRAL STAGING FOR A CLUTTER FREE, ELEGANT AND PRACTICAL WORKING AREA.

RECOMMENDED ACCESSORIES

2 SLAT DIAMOND SHELF

3 SLAT DIAMOND SHELF/STAGING

4'3" WIDE MAXIM

Unlimited Lengths from 4'5"

The Maxim is ideal if your growing space is limited. One of the key differences compared to the Compact is the additional 7" of roof height, which can allow for a third shelf to be fitted and, together with taller doors, the result is a larger growing space.

As standard are the double doors and low threshold along with cantilever bracing for extra strength, a superb upgrade especially if the building is sited in a location more exposed to the elements. Package deals are available for this model making it one of the best performing greenhouses in the market place at this size.

Maxim 4'x4' (Nominal), Integral Base, Alloy, Full Sheet Toughened Glass

6'x5' WIDE STREAMLINE

Unlimited Lengths from 4'5"

The long established Streamline by Elite remains a popular choice amongst growers with big aspirations from their smaller gardens or courtyards.

With large growing areas easily able to accommodate a combination of accessories, shelving and staging, together with the double doors and low threshold access, which are fitted as standard, superb performance is easily achieved from a 5'3" footprint.

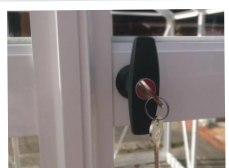

Streamline 6'x5' (Nominal), Integral Base, Olive, Full Sheet Toughened Glass

THE STREAMLINE'S FRAME ACCOMMODATES SUPER STRENGTH DIAMOND INTEGRAL STAGING FOR A CLUTTER FREE, ELEGANT AND PRACTICAL WORKING AREA.

5 SLAT DIAMOND STAGING

5'3" WIDE DELTA

Unlimited Lengths from 4'5"

Thanks to the additional 11" of roof height, the Elite Delta pushes the boundaries of what can be achieved from a 5'3" greenhouse. With much more room, taller and bigger produce and accessories can easily be housed and the standard feature of double doors and low threshold access help increase the potential.

Our cantilever braces, again fitted as standard, offer extra strength making it an ideal choice for an environment exposed to the elements.

6'3" WIDE CRAFTSMAN

1 2

Unlimited Lengths from 4'5"

For many years now, the Elite Craftsman has been a favoured choice for the serious grower and, at 6'3" wide, is one of the most popular sizes as it allows for superb storage space without taking away from a great workable area.

With Elite's fantastic packages available and such a wide choice of accessories and colours, you can easily tailor your Craftsman to work elegantly and effectively in your own environment.

for your greenhouse.

6'3" WIDE HIGH EAVE

Unlimited Lengths from 4'5"

The High Eave adds an additional 11" of growing height into the same 6'3" wide greenhouse seen previously in the Craftsman.

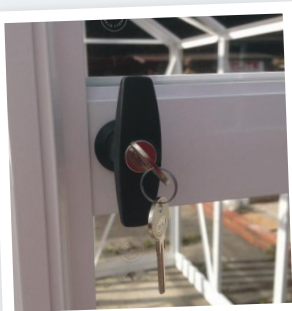

The result is simply greater room for taller produce, a higher door for easier access and a more voluminous working space to accommodate practical accessories such as hanging basket rails or the superb 19" wide diamond staging. With a choice of packages and of course available in any of our coloured finishes, the outcome is a superb yet practical greenhouse from a very popular choice of size.

6'3" WIDE STRATA

1 4

Unlimited Lengths from 4'5"

The 6'3" wide Elite Strata greenhouse stands head and shoulders above most other 6' wide models in the market. Thanks to the extra eaves height, your working space is increased giving a far healthier and stable environment for your products to flourish, as well as room for high level shelving, allowing you to maximise all of the usable areas in the greenhouse.

Fitted as standard with a double door, which is higher at 6'2" tall, the Strata features Elite's low level threshold doorway for ease of access when using a wheelbarrow or carrying heavy pots.

6'3" WIDE FEATURED DWARF WALL

Unlimited Lengths from 4'5"

The Dwarf Wall is a popular choice when the customer requires an eaves height of which part is brickwork and the remainder is glass and aluminium. The attractive, unique styling, often associated with a bygone era, is achieved from a combination of a traditional designed greenhouse yet without the cost and maintenance associated with a period wooden building. The 6' wide model comes with a single door, has Elite's low threshold and is only available with full sheet toughened safety glass which provides a neat and professional finish.

The bricks used should be a completely solid engineered brick with no holes and made to a good standard.

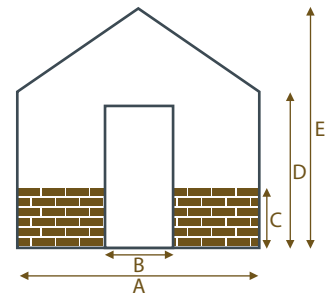

Why not finish your Dwarf Wall with Bar Capping and Cresting and Finials to complete the look.

When constructing a wall please only build your brick base once you have an official base plan from Elite.

Titan 8'x6' (Nominal) in Russia, Intergral Base, Graphite, Full Sheet Toughened Glass

If strength is your primary factor when choosing your greenhouse then the Elite Titan is unsurpassable. Our greenhouses have always been renowned for strength, however, our Core-Vect Technology offers massively thicker framework than any product we have ever made before and more aluminium content than the leading competitors, which is why we feel there is no stronger greenhouse available in the UK today. With so many features included as standard, such as a generous double door opening with our low threshold access, a 10 blade louvre, canopy seals, cantilevers on every bar as well as being available as standard in alloy or a choice from nine sublime colours. With a fantastic range of accessories, Elite present a high definition greenhouse which is unique to the marketplace.

Unlimited Lengths from 6'5"

DOUBLE
DOORS

Maiden, 9'x8' (Nominal), Integral Base, Stone, Full Sheet Toughened Glass

The Maiden by Elite, the latest addition to our incredible range of greenhouses, is a design which is sure to create quite an impression in any garden. Available in any of our nine sublime power coated finishes, as well as the traditional standard alloy, this model offers an amazing amount of growing volume thanks to the incredible roof design. Standing in its 8 feet wide footprint, the greenhouse offers an eaves height of 1583mm found throughout our 8 feet range, and yet the ridge height stretches out to a colossal 3160mm, thus providing a cavernous growing area for taller produce and allows for superb air flow for all crops. Based on the DNA found in the Titan series, arguably the strongest greenhouse on the market, the Maiden has our thickest aluminium bar and has its own unique gutter to collect the rain water from such a huge roof space and, as standard, is supplied with the rainwater kit, automatic openers on all of its roof vents together with generous double doors with our low threshold access, a 10 blade louvre, canopy seals, cantilevers on every bar and crestings and finials for some added finesse. A truly voluminous greenhouse standing literally head and shoulders above the competition.

And you certainly will not miss the Maiden T-shape modification made specially for the Russian market.

The Dwarf Wall is a popular choice when the customer requires an eaves height of which part is brickwork and the remainder is glass and aluminium. The attractive, unique styling, often associated with a bygone era, is achieved from a combination of a traditional designed greenhouse yet without the cost and maintenance associated with a period wooden building. The 8' wide model comes with a double door, has Elite's low threshold and is only available with full sheet toughened safety glass which provides a neat and professional finish.

The bricks used should be a completely solid engineered brick with no holes and made to a good standard.

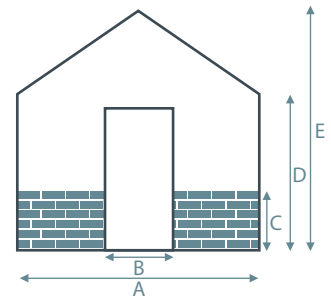

Why not finish your Dwarf Wall with Bar Capping and Cresting and Finials to complete the look.

When constructing a wall please only build your brick base once you have an official base plan from Elite.

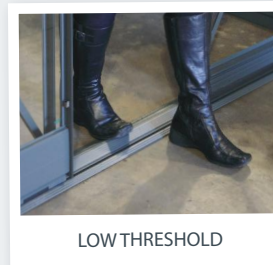

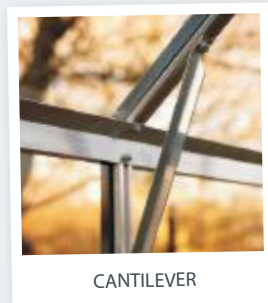

Dwarf Wall 10'x8' (Nominal), White, Full Sheet Toughened Glass

 Toughened Safety Glass

10'5" WIDE TITAN 1000

Unlimited Lengths from 6'5"

Titan, 20'x10' (Nominal) in Russia, Integral Base, Graphite, Full Sheet Toughened Glass

If strength is your primary factor when choosing your greenhouse then the Elite Titan is unsurpassable. Our greenhouses have always been renowned for strength, however our Core-Vect Technology offers massively thicker framework than any product we have ever made before and more aluminium content than the leading competitors, which is why we feel there is no stronger greenhouse available in the UK today. With so many

features included as standard, such as a generous double door opening with our low threshold access, a 10 blade louvre, canopy seals, cantilevers on every bar as well as being available as standard in alloy or a choice from nine sublime colours. With a fantastic range of accessories, Elite present a high definition greenhouse which is unique to the marketplace.

EXTENSIONS

Gardeners know that once your hobby grows you want to move onto bigger things.

"I just haven't got enough room for all my plants"

"I wish I'd purchased a bigger greenhouse"

"I can't afford to purchase a new, bigger greenhouse"

These are just a few of the comments we hear from customers who have been taken by the bug. In over 60 years of manufacturing our greenhouses, the answer to these questions has always been the same. Yes, we can make your greenhouse bigger!

All our greenhouses are made to the customers' specific length at the time of manufacture as we do not, unlike other manufacturers, make greenhouses in sections or with add ons. Each greenhouse can be made to unlimited lengths.

For you, the customer, to sell your current Elite and have to go and buy a new, bigger one not only sounds expensive but also unfair. Having made the initial investment and commitment to our products, like your produce, your greenhouse should be able to grow with you. With an Elite greenhouse then answer is that it can!!!

BEFORE 8'x6'

Please contact Elite or your nearest agent for more details.

AFTER 12'x6'

SPECIALS

As the manufacturer we feel that our range of products, sizes and specifications, which is the broadest range in the UK, covers pretty much every eventuality in a customer's choice and requirements. However, if you feel you have a specific need please get in touch and see if we can meet your special requirements.

DROP DOOR

A drop door modification is applied when the overall height of any Elite building needs to be increased.

It involves a brick wall being built by the customer to their desired height before a standard dimensional building is then constructed on top. A threshold is left in the wall for the door(s) to be dropped into and the cambered drop door then provides a neat and professional finish with the all important easy access.

As an optional extra, the doors can also be dropped on the larger greenhouse models (Supreme and Classique) and Lean-Tos providing a ground level threshold for easy access.

LEAN-TO

R-TYPE

5 4

Unlimited Lengths from 4'5"

R-TYPE LEAN-TO

Kensington 6 R-Type 8'x6' (Nominal)

The Lean-to R-type offers similar principles allowing flexibility to the gardener regardless of the growing space available.

Through the removal of its gable end, the Lean-to R-type allows not only the length section of the framework to be attached to a wall but, also, one of the gable ends making it ideal to fit into a restrictive space with two walls, such as an alcove or any L shaped area.

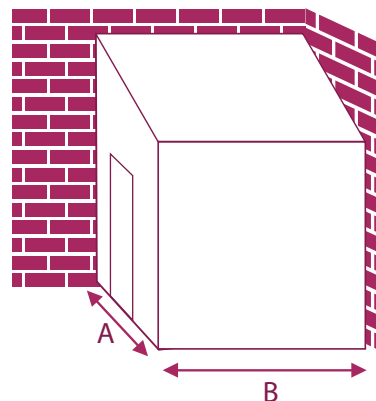

Simply decide how far you would like the building to extend from the wall which is governed by the models available. The R-type, like the traditional Lean-to, can then be made to any length and the desired gable end will be removed once your order has been confirmed.

Once you have chosen your desired R-type, the standard features available to the traditional model will then apply.

Kensington 6 R-Type 12'x6' (Nominal)

A WIDTH (Coming out from the wall)	B LENGTH
EASYGROW 2'3" (700mm)	from 4'5"
WINDSOR 4'4" (1320mm)	from 6'6"
KENSINGTON 4 4'4" (1320mm)	from 6'5"
KENSINGTON 6 6'4" (1940mm)	from 6'5"
K 800 8'4" (2535mm)	from 6'5"

You can omit the left or right hand gable (must specify)

Kensington 6 R-Type 10'x6' (Nominal)

R-TYPE GREENHOUSE

Compact R-Type 6'x4' (Nominal)

The R-type from Elite offers flexibility for your gardening space. The R-type can fit into your garden set-up through the removal of the framework's rear end thus allowing it to become an integral part of a wall, shed or garage.

The important consideration with the freestanding R-type is the apex width, the section of the framework which will attach to your designated vertical surface which is governed by the width of any of our freestanding models. Once you have chosen your building, it can then be made to any required length from the wall.

Once you have chosen your desired R-type, the standard features available to the traditional model will then apply.

High Eave R-Type 2'x6' (Nominal)

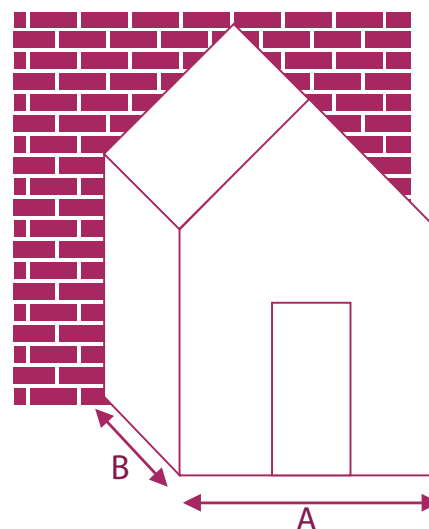

A WIDTH

The R-Type width depends on which freestanding greenhouse model you choose.

Choose any model from pages 6 through to page 37.

B LENGTH (Depth from the wall)

Unlimited lengths starting from 2' (610mm)

PACKAGES

We have designed our packages to help simplify choosing a greenhouse, to group together accessories to enable you to get started with a bang and to offer great value with one single price to pay.

The package features are in conjunction with the greenhouse's standard features.

Upgrade any package to toughened safety glass

GLAZING MATERIAL

HORTICULTURAL GLASS:

Available in 3mm thick overlapping glass sheets. Not recommended in roofs in Russia.

TOUGHENED SAFETY GLASS 4mm:

In the event of a breakage, the glass granulates removing any danger of injury. Elite only use Grade A toughened glass to Standard EN12150 which is primarily in full length sheets providing a neater finish, especially with bar capping, and removes any overlapping glass where algae and moss can often be a problem.

POLYCARBONATE:

UVI treated, twin wall with silvered edges and, like the toughened safety glass, it comes in full sheets and is a great option where children and pets are concerned. Elite offer 6mm thick on every model.

We do not recommend polycarbonate in Russia though.

Remember, when handling any type of glass the utmost care must be taken as it is extremely fragile when not in situ. Always protect your hands and eyes when handling glass and we advise that safety gloves and goggles are worn.

BAR CAPPING

Bar Capping provides a stronger hold for the glazing and adds a decorative finish to any greenhouse. The rubber fin also adds a better water seal between the frame and glass. Capping is used in addition to wire clips so in effect will add double protection which is ideal in more exposed areas.

The capping is simply screwed into position using colour coded screws which do not leave any unsightly silver screw heads on show.

Not recommended with overlapping glass.

POWDER COATING

- High class, hard wearing, professional powder coated finish
- Available in nine attractive colours – Green, Graphite, Black, White, Brown or Terracotta
- Co-ordinate with your garden environment
- Has been thoroughly tried and tested and has been available to Elite customers for over 20 years
- Environmentally friendly way of applying colour to aluminium unlike wet paint which requires the use of solvents
- Most aluminium accessories can also be powder coated to suit your greenhouse
- A good depth of colour
- The frame is resistant to corrosion, UV degradation and offers a life expectancy in excess of 25 years
- All Elite's frames are individually wrapped in polythene and labelled for added protection during transportation and storage
- Elite provide nut caps with all powder coated models and accessories to give a nice, clean, professional finish to your product by covering up any unsightly nuts and bolts.

BASES

THE MOST POPULAR METHOD IS TO LAY A LEVEL FLAGGED AREA.

Please remember to build your slabs slightly bigger than the greenhouse size, as this gauge is only nominal and the product is actually a few inches bigger. For example, for an 8'x6' greenhouse you might want to consider a slab area of 10'x8' as this will allow you to position water barrels and will also allow enough room to get around the greenhouse to clean and maintain.

SOFT GROUND

The majority of greenhouses are constructed onto a solid foundation however if your greenhouse is being constructed onto soil or grass, persistent stepping on the door cill will cause damage as it will naturally follow the contour of the ground. A hard support, such as flags, must be fitted under the cill and Elite recommend using their soft soil support which allows the door(s) to run in the track.

Hard or soft surface, Elite provide, as standard, both options to anchor the base down.

FREE STANDING GREENHOUSE UP TO 8' WIDE

Elite, as standard, offer only aluminium bases which are an integral part of the framework giving additional strength - the stronger the base the better! Elite only supply bases made from aluminium therefore removing the fear of rust, rot or warping. Due to the fact Elite's aluminium bases are an integral part of the framework, this has allowed us to manufacture a low threshold door which also means the door(s) are taller. As standard the door(s) are "dropped" into the base providing a ground level threshold allowing easy access for the user. Please note a base is not required on the iGro or GX range.

LARGER GREENHOUSES

- 10' & 12' WIDE

For extra stability and strength on the larger models we recommend building a brick base. A solid engineering brick should always be used, however, please note that the number of bricks used in the base height will result in a higher step-over into the greenhouse. Overlapping cills demonstrate a need for accuracy when building a brick base. As an optional extra the door(s) can also be dropped into the brick work to allow wheelchair and wheelbarrow access. Please refer to the technical information on page 64 for exact measurements.

As an optional extra, Elite offer an integral aluminium base with drop doors giving low level threshold for the 10' and 12' wide greenhouses.

OPTIONAL EXTRA

LEAN-TO

Elite offer a separate 5" aluminium base on all Lean-Tos as an optional extra. The aluminium base is versatile in that it has the ability to go directly onto soil or grass and can be adapted for any solid foundation, such as concrete slabs.

The lean-to base does not have a ground level threshold as standard, however as an optional extra the door(s) can be dropped into the aluminium base/brick work to achieve this.

On the Titan K800 Lean-To no base is required. The Lean-To is supplied with flat cills. However, (as an optional extra) Elite offer an integral aluminium base with drop doors giving low level threshold should a base be required.

OPTIONAL EXTRA

CONSTRUCTION

Every Elite comes with its own set of comprehensive instructions. The level of difficulty assembling each model depends solely upon the competence of the individual. For most sized greenhouses, depending upon ability, speed and helpers available to you, a building can be completed within a weekend. However, we recommend you take your time in constructing your greenhouse, plan each stage of the build and follow the instructions carefully.

Anyone with a reasonable level of practical ability can construct an Elite easily, however, the majority of garden centres operate a construction service in the event of you preferring it to be done for you. This offers peace of mind that the product has been assembled correctly.

Tools needed:

Step ladders, M6 – M10 Spanner, Pozi Drive screwdriver, Gloves, Goggles

For additional guidance during construction visit our website and watch our helpful video tutorials. www.elite-greenhouses.co.uk

WHERE TO BUY

Today's budding gardeners and enthusiasts have many avenues available to them with regards to sourcing an Elite product. We, as the manufacturer, do not sell direct to the general public, but instead supply garden centres and garden building outlets across the UK. Many dealers appear in magazines, flower shows and on the internet and offer show sites where you can actually go and view a fully constructed product.

If you are unsure where to begin, then simply contact us directly on 01204 791488 or email us at enquiries@elite-greenhouses.co.uk. One of our staff will be more than happy to provide you with details of your local suppliers.

Elite deliver the majority of greenhouses direct to your door, nationwide, using our own fleet of vehicles. Customers based in Ireland, parts of Scotland and other off shore locations can arrange their delivery through local agents.

Our vehicles are Class II 15 ton lorries, similar in dimensions to a furniture removal van, so if you have access restrictions to your property then please contact your supplier to discuss an alternative address and to clarify your postcode for the delivery route.

The exception to our delivery policy is where some garden centres, or dealers, stock levels of products to reduce costs and delivery lead times and, in these instances, the delivery will be arranged by them. This will also apply if your stockist has arranged to construct your product for you.

Our lead times are only for guidance so please check with your stockist as they can vary throughout the year. Please inform your stockist if you are unable to take delivery at any time.

Our drivers are accustomed to delivering to unattended properties and will deposit wherever you require and post the paperwork through your letter box to enable you to check the items on your return.

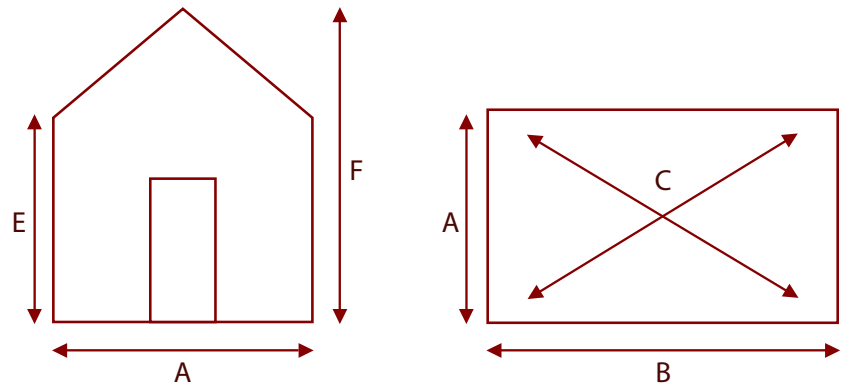

If you know your address is difficult to find, or there is something unusual about your address (like the postcode doesn't bring you anywhere near your house) let your agent know at the time of ordering.

TECHNICAL INFO

Long lengths are available on every model listed.

Please contact your supplier for a base plan for any size or modification (Drop Door, Dwarf Wall, Partition etc.) not listed on this page.

When constructing a wall please only build your brick base once you have an official base plan from Elite.

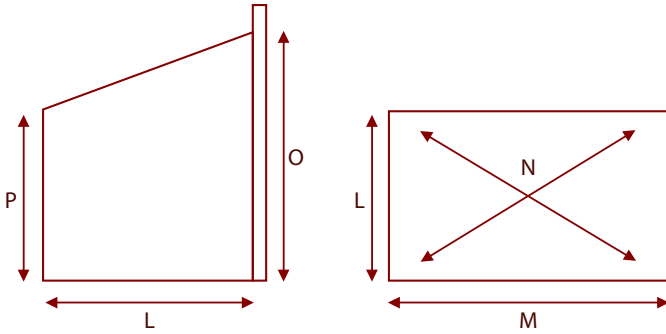

Exact base dimensions for Elite range (where required). The following measurements are external dimensions... Please note the width at the gutter is wider than the base.

TECHNICAL INFO

Long lengths are available on every model listed.

Please contact your supplier for a base plan for any size or modification (Drop Door, Dwarf Wall, Partition etc.) not listed on this page.

If you have anything overhanging the ridge on a lean-to, please allow 1" (25mm) height clearance for the roof vent.

KEY

● : Standard Features

○ : Optional Extra

BIB : Built in Base

O - BIB : Optional Built in Base

O - SB : Optional 5" Separate Aluminium Base

R - BB : Recommended Brick Base

BRK : Brick Wall

SD - L : Single Door available on Length only

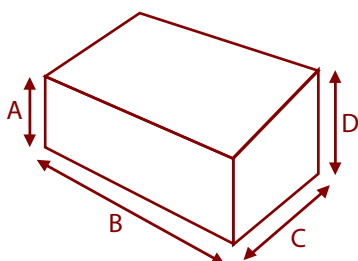

SD - W : Single Door available on Width only

SD - LW : Single Door available on Length and/or Width

O - DD : Optional Double Door on Length (and/or Width if over 8')
